TEMAC was formed in 2003 to promote Model Aviation powered solely by electric power systems. A pioneer in the field TEMAC is a leader in advancing this segment of the hobby in the GTA. We welcome all to join with us in this rewarding and creative hobby. Free, competent instruction is provided and we encourage participation by young people. We are currently accepting new memberships.

Members must demonstrate competency to fly unassisted. Free instruction will be available to all others to prepare them to obtain MAAC Wings status. MAAC membership is required to fly at Rogo Field. This is an insurance policy condition. The field is surrounded by a large open area of agricultural land and has no immediate obstacles in the vicinity. A Pit Area, Pilot Stations, Wind Sock and parking are provided. Improvements are ongoing. The runway is mowed weekly and is oriented North to South with the Pilot Stations facing East. The flying Season is from Spring to Fall weather permitting.

Our flying field is called "Rogo Field" named for our founder Michael Rogozinsky whose vision led to the creation of the club.
 Rogo Field is located on the South side of Stouffville Road a half kilometer East of Kennedy Road in the North East GTA.
